

GH-153997931

The museum is envisioned as the culmination of a complex union between nature, human action and art seeking as final destination evolution. The representation of this interaction is assumed by this three individual routes being embraced by the museum itself, which we designate as the path, and conforming unity in a common front for the search of a progressive destination... Evolution.

By empowering Guggenheim Helsinki as the Physical reference of Nordic Cosmology, We have decided to determine its soar as Yggdrasill and therefore reinforce the Finnish strong connection between Nature and Architecture.

Guggenheim Helsinki is conceived as an urban landmark in which the city, Tahitiitornin Vuori Park and the South Harbor coincide. It'll stand out from its near environment and will strive for long distance visibility, therefore eligible for becoming symbol.

For every destination, there are new routes to be walked upon...
Let us stride together.
